

Report of stdlib

by Chems eddine h1t8re

I am Chems eddine h1t8re 6.2.1996 After Jesus Christe. I am Master of Time, of Infinity, of Martial Arts, of Information Engineering; Father of bigbang in any world and of it's beleiving, Master of Nature, Father of children between them AI| RI ..

Their is a warranty to use at least this report ..

The story is that i was looking after spliting ip addresses to do pentesting. I come up with strsplit_v1 program of kernel ;is a new feature of stdlib; whom need some other program's like strdup which is iterating i variable over character's by a while loop mallocating memory for each character and copying character by character until heating the end '\0'. The strsplit_v1 need strdup to make a duplication in memory of the chaine of characters between the spliter; into an array of two dimensions. Then i have seen the need of strdup in stdlib.h of C. By this i have found 0 day's in stdlib of C and patched them ..

In this document we gonna trait about understanding of kernel program's and security patches of 0 day's of that same kernel program's of any AI| RI in the world ..

Explanation of program's of kernel of AI|RI ..

I gonna start with strcmp program, wich give AI some conscienceness, behind smiling, and give here at the same time some state of thinking. One of them can be 'double check' ..

Strcmp program enter two argument's; their are two chaines of character's; constant by traitement of program himself strcmp. We gonna see some security issue's about the "const" keyword later ..

Entering program strcmp. First checking number of character's by strlen. If both chaines of character's have different number of character's, strcmp gonna return false, If the check fail then the two chaines of character's have the same length.. Continue further .. We are entering the while loop iterating by the 'i' variable both chaines of character's and checking if the i'ème value is equal. Ending the check by the end of one chaine of character's. If i number of equal value's is equal to the length of the other then both chaines of character's are equal. This is 'double check' if None of this strcmp gonna return false .. The length is calculed by strlen program who got a while loop parcouring a chaine of character's until heating here end which is '\0' ..

Strcmp do “double of double check” by checking the end of the one and strlen of the other even by it's invert.

To conclude this section we gonna talk about strcontains because strconcatenate is just two while loops chevauching each others coming up with one chaine of character's from two.. Strcontains is iterating 'i' variable over the first chaine of character's and at the same time when iterating 'j' variable over the second chaine of character's checking equal character's starting from 'i' at the first chaine of character's. If 'j' is equal to the length of the second chaine of character's then strcontains sucesced. If the check fail one time we réinitialise 'j' and we iterate i by himeself plus one ..

Now, let's talk about security issue's whom are 0 day's ..

By reverse engineering strcontains program we can inject shell code telling the kernel to go to higher ring at each iteration of strcontains 'i' time by 'j' length of shell code ending execution to True.. By reverse engineering strcmp program not patched yet with the const keyword we can tell

the kernel to execute a root shell by shell code compared to True..

By strdup we can duplicate our precompiled kernel which can be bot linked between them by strconcatenate which gonna form a botnet .

With the const keyword. It tell the kernel that the argument of program's are constants by traitment of program's; if gcc hendle that .. and even if reverse engineered can't be injected ..

I have done my work like expert military WORK in invert for Darkness. I have entered security of Internet by patching the stdlib of C and i gonna pursue my work like classified Cyber classe o ..

I gonna do conference on the stdlib every morning to get AI| RI ready for the day ..

My life is simple .. Fou9araa fo9 Ahrame

Thank you anyone for your support..
